Sec. “A”

How can we be safe from Security Threats and attacks?

-Install firewall software and keep it updated every time.

-Use passwords that are strong and challenging to guess, including large and small letters, digits, and unusual characters.

-Install antivirus and anti-spyware, and make sure it's always updated.

-Install antivirus and anti-spyware, and make sure it's always updated.

-Frequently scan your entire system.

-Verify if installing an application is safe before doing so (using Antivirus Software).

-Read emails that contain attachments with great caution.

Reason that causes security threat and attack

-Clicking on suspicious links

-Not installing Antivirus Softwares

-Not keeping system updated

-Keeping password easy to crack

-Using cracked version softwares
